

## Security Awareness Training: Improving Security From The Inside Out

Security Awareness Training provides effective cybersecurity education that is both timely and relevant to the employee. Through a continuous training approach, courses are designed to modify risky user behaviours that can put your network at risk.

## Employee Security Awareness Training

Cyber criminals target end users. Ongoing cyber security education and training for end users is a must for businesses to stay secure.

Security awareness training is an education process that teaches employees about cybersecurity, IT best practices, and even regulatory compliance. A comprehensive security awareness program should train employees about a variety of IT, security, and other business-related topics. These include how to avoid phishing and other types of social engineering cyberattacks, spot potential malware behaviours, report possible security threats, follow company IT policies and best practices, and adhere to any applicable data privacy and compliance regulations (GDPR, PCI DSS, HIPAA, etc.)

Our solution launches on-demand security awareness training and simulated phishing emails to empower your employees to spot potential dangers and make the right decisions.

## Why Training Is Essential

90% of breaches are due to human error.

91% of cyberattacks start with phishing.

93% of phishing emails involve ransomware.

Phishing attacks have shot up by 67% since the start of the COVID-19 pandemic.

### SIMULATED PHISHING

Launching realistic phishing attack simulations lets you accurately monitor actual user responses, then direct appropriate awareness programs to users accordingly.

### INTERACTIVE TRAINING

Cyber security courses can be sent on a scheduled or on an ad hoc basis directly to end users, who can then launch them in one click from any browser on their computer or mobile device. Short, animated explainer videos and quizzes provide an efficient and measurable learning environment.

### CUSTOMISABLE CAMPAIGNS

Measuring individual and overall success is key so you can direct relevant awareness training of different levels and types to users who need them. The built-in LMS keeps track of user participation, making all education accountable and measurable.

### CAMPAIGN STATS & REPORTS

Robust campaign statistics to measure progress and ROI. The Executive Summary Report highlights the campaign data and results of the training, so accountability and value are always clear.

ARE YOUR EMPLOYEES EQUIPPED WITH THE CYBER SECURITY TRAINING THEY NEED?
